| Team ID       | xxxxxx                                  |
| Project Name  | Smart Lender (Loan Approval Prediction) |
| Maximum Marks | 1 Mark                                  |

## Demonstration of Proposed Flow Template

Verification of features demonstrated during the final project review.

| S.No | Proposed Feature         | Description                                                               | Implemented | Demonstrated | Remarks                        |
|------|--------------------------|---------------------------------------------------------------------------|-------------|--------------|--------------------------------|
| 1    | Home Screen              | Welcome portal displaying overview details and project info.              | Yes         | Yes          | Served at /.                   |
| 2    | Interactive Form Input   | Input fields for income, dependents, marriage status, and credit history. | Yes         | Yes          | Served at /predict.            |
| 3    | Categorical Data Mapping | Translates string selections (Graduate, Urban) to integer classes.        | Yes         | Yes          | Handled internally in backend. |
| 4    | Numerical Scaling        | Applies StandardScaler fit mapping to numerical arrays.                   | Yes         | Yes          | Handled using scaler.pkl.      |
| 5    | ML Risk Classification   | Calculates classification prediction (0/1) using Random Forest.           | Yes         | Yes          | Loads model.pkl via joblib.    |
| 6    | Display Result Page      | Outputs approval/rejection decision dynamically.                          | Yes         | Yes          | Served at /submit.             |
